OFFICIAL TOYOTA DISTRIBUTOR

Development

In the development of the All-New Toyota Land Cruiser Prado, Toyota had an essential goal for customers to be able to go anywhere and come back safely. Toyota focused on its traditional strengths of quality, durability and reliability making the most difficult terrains easy work for the All-New Toyota Land Cruiser Prado.

Underpinning every Land Cruiser Prado 250 series is a new platform, the body-on-frame Toyota New Global Architecture GA-F platform shared with the Land Cruiser 300. It provides the foundation for excellent response, ride, and handling – on and off-road.

Engine

The new generation Land Cruiser Prado boasts a formidable 1GD engine, a 2.8-litre turbo-diesel delivering an impressive 150 kW of power (204 HP) and a robust 500 Nm of torque. This powerful engine is paired with the new 8-speed automatic gearbox for an optimum balance between performance and fuel consumption.

Design

The Land Cruiser Prado is distinguished by the subtle combination of traditional design elements with modern features, creating a vehicle that excels in both style and function.

The exterior design features a classic Land Cruiser silhouette, with strong horizontal lines. The dimensions of the new-generation Land Cruiser Prado have changed significantly compared with the previous model, with a length of 4,930mm, a width of 1,980mm and a height of 1,935mm. The wheel base has increased to 2,850mm.

Inside, the feeling of being in an off-road vehicle is amplified by the thoroughly refined styling. The new design further enhances functionality, with a horizontal instrument panel with clear and easy-to-use switches for all driving conditions.

To celebrate the launch in Uganda, a very limited number of Land Cruiser Prado First Edition vehicles have been made available. This limited-edition version of the Land Cruiser Prado features retro-inspired circular headlights and exclusive First Edition badging that are only available on this version of the Land Cruiser Prado.

Electric power steering

One of the major innovations in the new Land Cruiser Prado is its Electric Power Steering (EPS) system. Thanks to this technology, the system measures the driver's steering force and adds suitable assisting torque to reduce driver's steering effort. The vehicle's steering is smoother and direct feedback into the steering wheel on uneven surfaces is greatly reduced.

Ready for adventure

No matter what the terrain throws at you, Multi-Terrain Select (MTS)* means the Prado is ready to adapt to its conditions at just the flip of a switch. Choose between Rock; Rock and Dirt; Mogul; Loose Rock; and Mud and Sand settings, and handle unpredictability with maximum efficiency.

As conditions change, the Multi-Terrain Monitor* is there to help you confirm your outdoor surroundings and check blind spots with front, side and rear cameras. The Multi-Terrain Monitor is automatically displayed on the navigation display in accordance with your chosen MTS mode.

*Available on selected models

Advanced safety

- » VSC: Vehicle Stability Control.
- » Impact Absorbing Structure: Load dispersion is adopted in consideration of collision safety and pedestrian protection.
- » A-TRC: Active Traction Control enables stability when driving off-road or in slippery conditions.
- » Crawl Control for obstacle clearance assistance.
- » HUD (Heads-Up Display) to make information easier to read for the driver.
- » Airbags - available with up to 8 airbags, grade dependent.
